INDEX

| | |
|----------------------------------|--------|
| 1. M.T.B.F. | T - 1 |
| 2. Component Derating | T - 2 |
| 3. ΔT Temperature Rise | T - 5 |
| 4. E - cap. Lifetime versus Load | T - 6 |
| 5. Abnormal Test | T - 11 |
| 6. Vibration Test | T - 14 |
| 7. Noise Simulation Test | T - 16 |
| 8. Electrostatic Discharge Test | T - 17 |
| 9. Lightning surge Test | T - 18 |

The above data is typical value. As all units have nearly the same characteristics, the data to be considered as ability value.

SWT65 - *

M.T.B.F.

1. Method of calculation

Calculated based on part count reliability projection of MIL - HDBK - 217F.

Individual failure rates λ_g is given to each part and M.T.B.F. is calculated by the count of each part.

Formula :

$$\begin{aligned} \text{M.T.B.F.} &= \frac{1}{\lambda_{\text{equip}}} \\ &= \frac{1}{n \sum_{i=1}^n N_i (\lambda_g \pi_q)_i} \quad (\text{HOURS}) \end{aligned}$$

Where :

λ_{equip} = Total Equipment Failure Rate (Failures/10⁶ Hours)

λ_g = Generic Failure Rate For The ith Generic Part (Failure/10⁶ Hours)

N_i = Quantity of ith Generic Part

n = Number of Different Generic Part Categories

π_q = Generic Quality factor for the ith Generic Part $\pi_q = 1$)

2. M.T.B.F. Values

G F. (GROUND , FIXED)

M.T.B.F. = 346,998 (HOURS)

COMPONENT DERATING

(At nominal Line and Rated Load , Ambient Temperature 50°C)

Method of calculation

A. Semiconductors

The derating factor is taken as the ratio of the actual operating junction temperature taking into consideration operating ambient temperature , power loss and thermal resistance to the maximum rated junction temperature specifications of the components.

B. IC, Resistors, Capacitors etc.

Operating ambient temperature, operating condition, power loss for each individual component are all designed to meet the requirements of Nemic - Lambda's design standard.

C. Thermal Resistance Calculation

$$R_{th(j-c)} = \frac{T_j(max) - T_c}{P_d(max)}, \quad R_{th(j-a)} = \frac{T_j(max) - T_a}{P_d(max)}$$

Tc : Case Temperature (Normally 25°C)

Ta : Ambient Temperature (Normally 25°C)

Pd(max) : Maximum Power Loss

Tj(max) : Maximum Junction temperature

Rth(j-c) : Junction to Case Thermal Resistance

Rth(j-a) : Junction to Ambient Thermal Resistance

VIBRATION TEST

Type of vibration test : A) Oscillator frequency sweep

Equipment used : Vibration test system F - 400 - BM - E47 (EMC CORP.)
Vibration generator 905 - FN(EMC CORP.)

Procedure :

A) Vibration test with frequency sweep

| | | |
|-----------------|---|---------------------------|
| Sweep frequency | : | 10 - 55Hz |
| Sweep time | : | 1min |
| Acceleration | : | Fixed 2G |
| Direction | : | X,Y,Z. |
| Duration | : | 1hour for each direction. |

Test point :

- 1) Output voltage (Apply some shock when checking the output voltage, and observe any abnormalities.)
- 2) Ripple voltage (At nominal input and output.)
- 3) Mechanical condition (No breakage.)

SWT65 - *

Test result :

| Test Point | | Output voltage (V) | | | Ripple voltage (mV) | | | Mechanical Condition | Note |
|---------------|-----------|----------------------|--------|--------|-----------------------|-----|-----|-------------------------|------|
| | | CH1 | CH2 | CH3 | CH1 | CH2 | CH3 | | |
| Before test | | 5.009 | 12.185 | -5.001 | 40 | 70 | 5 | O.K. | |
| After test | Direction | | | | | | | | |
| | X | 5.110 | 12.189 | -4.998 | 40 | 70 | 5 | O.K. | |
| | Y | 5.159 | 12.222 | -5.001 | 40 | 62 | 5 | O.K. | |
| | Z | 5.154 | 12.219 | -5.000 | 40 | 65 | 5 | O.K. | |

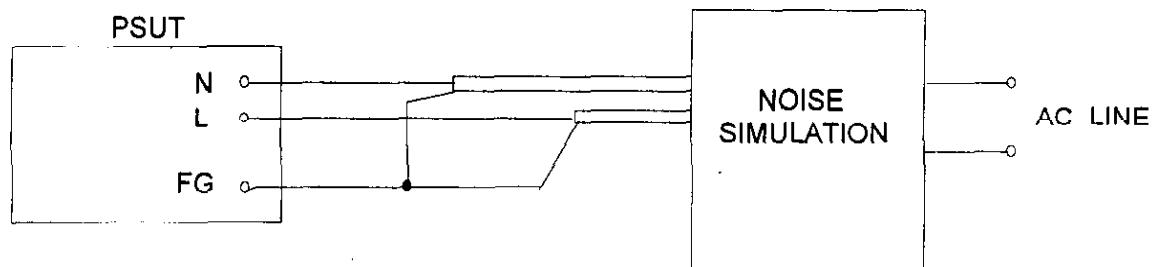

Evaluation result :  / FAIL

Visual inspection result :  / FAIL

NOISE SIMULATION TEST

Circuit for measurement and equipment used :

MODEL : ENS - 24X (SANKI)

Test condition :

| | |
|----------------|--------------|
| Input voltage | : 100VAC |
| Output voltage | : Rated |
| Output current | : Min . 100% |
| Ambient temp. | : 25°C |

Settings :

| | |
|-------------|---------------------------|
| MODE | : Normal , Common |
| TRIG SELECT | : Line |
| PULSE WIDTH | : 50 , 200 , 800 , 1000ns |
| PHASE SHIFT | : 0° ~ 360° |
| POLARITY | : + , - |
| NOISE LEVEL | : 0 ~ 2KV |

Acceptance criteria :

- 1) No damage of PSUT.
- 2) No output failure.
- 3) Check any abnormalities. (e.g. noise)

Evaluation result :

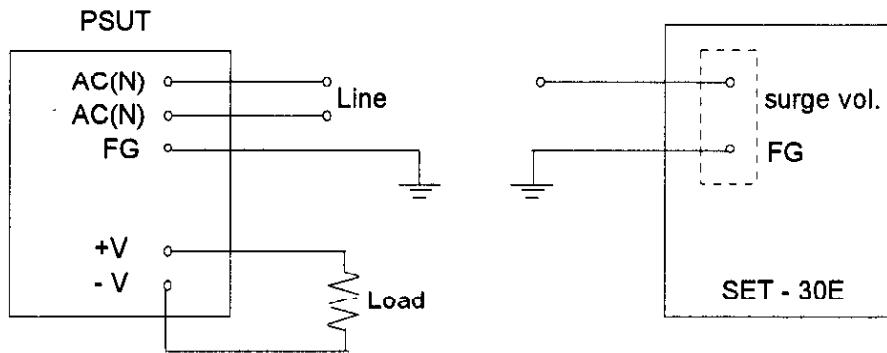

/ FAIL

ELECTROSTATIC DISCHARGE TEST

- Equipment used : SET - 30E (SANKI ELECTRONIC)
Discharge resistor : 250 Ω
Capacitor unit : 200 pF
- Test conditions : Input voltage : Nominal Line (100VAC)
Output voltage : Rated
Output current : 100%
Ambient temperature : 25°C
Applied voltage : $\pm 3KV$, $\pm 5KV$, $\pm 10KV$, $\pm 15KV$
- Procedure : The PSUT should be in a good working condition.
Discharge the applied voltage to the touchable parts of
the PSUT (Chassis, Input Terminals, Output Terminals,
FG Terminal) and check any abnormalities.
- Each point to be tested 3 times with different polarity.
Voltage should be applied from 3KV to 15KV.

Test circuit :

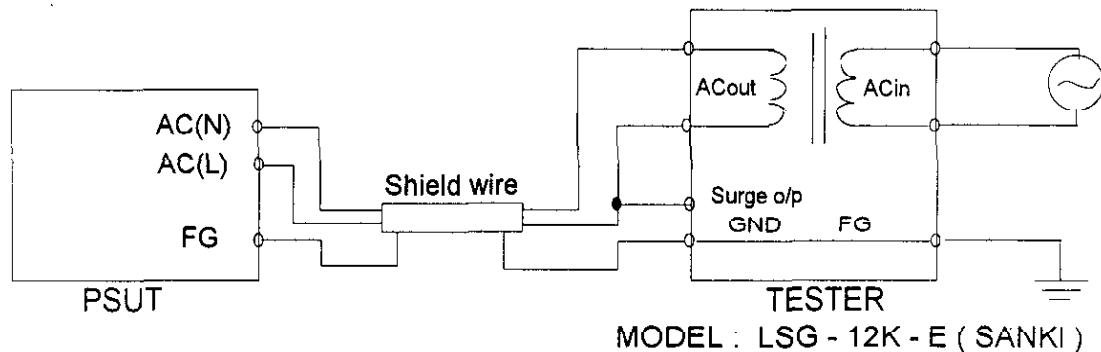

Acceptance criteria : 1) No damage of PSUT.
2) No output failure.
3) No abnormalities.

Evaluation result : PASS / FAIL

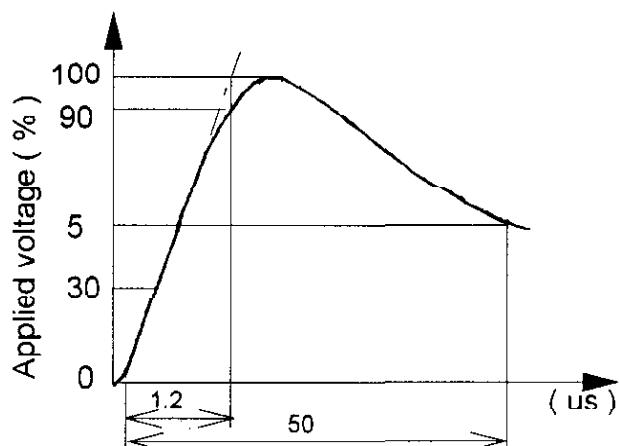

LIGHTNING SURGE TEST

Test circuit, Test equipment

| | | |
|-------------------|-----------------|--|
| Test conditions : | Input voltage | : 100VAC |
| | Output voltage | : Rated |
| | Output current | : Rated |
| | Ambient temp. | : 25°C |
| | Applied voltage | : From 3KV in steps of 0.5KV Check the max. withstand voltage |
| | Applied point | : Between FG - AC |
| | Number of test | : Each voltage 3 times |
| | Polarity | : + , - |

Applied voltage waveform :

- Acceptance criteria
- 1) No damage of PSUT.
 - 2) No output failure.
 - 3) No abnormalities.

Evaluation result : 4.0KV **PASS** / FAIL
