GENERAL PRODUCT INFORMATION:

Report Summary

The original report was modified on 2020-12-11 to include the following changes/additions:
 Technical Amendment: This report has been revised for adding an alternate magnetic supplier "Axis Corporation" in the LoCC table.

Based on the previously conducted testing and the review of product technical documentation, it has been determined that the product continues to comply with the standard and all required tests were carried out under the original investigation.

This report should be read in conjunction with CBTR Ref. No: E135494-A6011-CB-1-Original - Amendment-1, and -Amendment-2; CBTC Ref. no: DK-85162-M2-UL issued on 2020-09-23.

Product Description

The QM, QI or QS series of switch mode power supply consists of:

Main board

1. Input filter, consisting of the input fuse(s), X and Y capacitors, common mode chokes up to the bridge.
2. PFC (boost circuit), consisting of the boost choke and associated switching FETs/circuitry.
3. Low power Standby circuit and Fan outputs consisting of the fly-back transformer and switching IC/circuitry supplying the Low Power Standby option and Fan outputs.
4. Secondary circuits, consisting of supply to the Low Power Standby output and fan supply.

Modules

5. Forward converter situated on the module, consisting of the main transformer and switching FETs/circuitry.
6. Secondary circuits, consisting of Module output, CH1/2 good and inhibit/enable.

Standby options

- 7. High power Standby circuit, consisting of the standby transformer and switching IC/circuitry supplying the High Power standby output.
- 8. Low power Standby circuit, supplied from the Main board.
- 9. Secondary circuits, consisting of High Power Standby output, Low Power Standby output, fan supply, AC fail and inhibit/enable.

(See Model Differences for details of nomenclature)

Model Differences

See Enclosure 7-01.

Additional application considerations – (Considerations used to test a component or sub-assembly) -

For best thermal performance and to ensure safety requirements are met at full load conditions, products are configured with modules starting from slot 1 in the following order:

- 1. Highest power SC modules
- 2. Lower power SC modules
- 3. Any other modules

Consult TDK-Lambda UK Ltd if a non-standard configuration is required.

Cooling for unit

Component temperatures for customer air cooled models, must be monitored in the end use application described in the "Cooling for Unit Temperature Table" below:

The following method must be used for determining the safe operation of PSUs.

The components listed in the following table must not exceed the temperatures given. To determine the component temperatures the heating tests must be conducted in accordance with the requirements of the standard in question. Consideration should also be given to the requirements of other safety standards. Test requirements include: PSU to be fitted in its end-use equipment and operated under the most adverse conditions permitted in the end-use equipment handbook/specification and which will result in the highest temperatures in the PSU. To determine the most adverse conditions consideration should be given to the end use equipment maximum operating ambient, the PSU loading and input voltage, ventilation, end use equipment orientation, the position of doors & covers, etc. Temperatures should be monitored using type K fine wire thermocouples (secured with cyanoacrylate adhesive, or similar) placed on the hottest part of the component (out of any direct airflow) and the equipment should be run until all temperatures have stabilised.

Technical Considerations

- The product was submitted and evaluated for use at the maximum ambient temperature (T_{ma}) permitted by the manufacturer's specification of : 70°C, (65°C for QM5 option I), total output power and module output power de-rated 2.5% per °C above 50°C
- The product is intended for use on the following power systems : TN, TT
- The equipment disconnect device is considered to be : provided in the end product
- The following were investigated as part of the protective earthing/bonding : Printed wiring board trace (refer to Enclosure - Schematics + PWB for layouts)
- The following are available from the Applicant upon request : Installation (Safety) Instructions / Manual
- The product was investigated to the following additional standard : EN 62368-1:2014 + A11:2017
- Capacitors are rated for 230V due to the IT power system used in Norway. Further evaluation may be required in the end use product.

Engineering Conditions of Acceptability

When installed in an end-product, consideration must be given to the following:

- The following product-line tests are conducted for this product : Earthing Continuity
- The end-product Electric Strength Test is to be based upon a maximum working voltage of : Primary-Secondary: 457Vrms, 665Vpk, Primary-Earthed Dead Metal: 373Vrms, 680Vpk
- The following output circuits are at ES1 energy levels : see Model differences in Enclosure 7-01
- The following output circuits are at ES2 energy levels : see Model differences in Enclosure 7-01
- The following output circuits are at ES3 energy levels : see Model differences in Enclosure 7-01
- The following output circuits are at PS3 energy levels : all circuits
- The maximum investigated branch circuit rating is : 20 A
- The investigated Pollution Degree is : 2
- Proper bonding to the end-product main protective earthing termination is : Required
- An investigation of the protective bonding terminals has : been conducted
- The following end-product enclosures are required : Mechanical, Fire, Electrical (excluding QM5 option I, non-customer air version, front end)
- The following magnetic devices (e.g. transformers or inductor) are provided with an OBJ2 insulation system with the indicated rating greater than Class A (105°C) : examples: T2 (Class B) or L1 (155°C), examples: T2 (Class B) or L1 (155°C), examples: T2 (Class B) or L1 (155°C), PFC : TX1 Class F, MODULES: TX1 (TX2 for SA modules) Class B except 12V SC Module TX1 Class F. GLOBAL OPTIONS/PMBUS: TX1 Class F. See Critical Components Table for details of insulation systems used.
- Fans: The fan provided in this sub-assembly is not intended for operator access.
- All models require component temperatures to be monitored as detailed in the additional information.
- Model KQM5001V-x is a customer air model and due consideration to the cooling in end equipment as described in the Additional Information section must be applied.
- TS3 metal chassis/enclosure accessible to skilled person, skilled safeguard to be considered in the end-product.
- For frequencies above 63Hz, the requirements of clause 5.7 must be considered in the end application.

Miscellaneous ID 07-01

Model Differences –

This report covers the QM, QI and QS series of switch mode power supplies. The QS is identical to the QM and QI series but allows for only one output made up from modules either in series or in parallel. The QM, QI and QS series consists of 4 slot models (QM4/QS4/QI4), 5 slot models (QM5/QS5/QI5), 7 slot models (QM7/QS7/QI7) and 8 slot models (QM8/QI8) with each slot capable of fitting single or dual modules (SC module requires two slots) and Non- standard models, see below for details. The QM4, QI4 or QS4 are available as 550W or 650W. The QM5, QI5 or QS5 are available as 700W, 800W or 1200W and the QM7, QI7, QM8, QI8 or QS7 are available as 1200W or 1500W depending on the input voltage. There is a QM8B and QI8B version which are available as 1200W, 1500W and 2000W. High power/Low power and PMBus Standby Options may be fitted.

Units may be marked with a Product Code: KQMxy or KQSxy where x is the number of available slots and y may be any number of characters.

Unit configuration Code (Description): may be prefixed with NS # followed by / or - (where # may be any number of characters indicating non-safety related model differences).
