*Read instruction manual carefully, before using the power supply unit.

=NOTES=

- *1. At 115/230VAC & 110/220VDC, Ta=25°C, nominal output voltage and maximum output power.
- *2. For cases where conformance to various safety specs (UL, CSA, EN) are required, to be described as 100 ~ 240VAC(50-60Hz).

- *3. Not applicable for the in-rush current to noise filter for less than 0.2ms.

- *4. Please refer to Fig. A for measurement of Vo, line & load regulation and ripple voltage.

- *5. Ripple & noise are measured at 100MHz by using a 150mm twisted pair of load wires terminated with a 0.1uF and 100uF

- *6. 85 ~ 265VAC & 88 - 370VDC, constant load.

- *7. No load-Full load, constant input voltage.

- *8. Hiccup with automatic recovery.

Avoid to operate at over load or short circuit condition for more than 30seconds.

- *9. OVP circuit will shut down output , manual reset (Re power on) to get output voltage.

- *10. Measured by the each measuring method of UL, CSA and EN (at 60Hz), Ta=25°C.

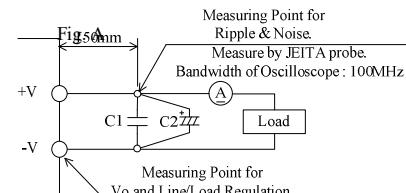

- *11. Output derating

- Derating at standard mounting. Refer To Output Derating Curve for details of output derating versus input voltage and ambient temperature.

- Load (%) is percent of maximum output power or maximum output current, do not exceed its derating of maximum load.

- Start up at -40°C is possible.However, it may not fulfill all the specifications. Please read instruction manual for detail information.

- *12. Output Derating needed when input voltage less than 120VDC, refer to CA821-01-03/S1_
