=NOTES=

- *1. At 115/230VAC & 110/220VDC, Ta=25°C, nominal output voltage and maximum output power.
- *2. For cases where conformance to various safety specs (UL, CSA, EN) are required, to be described as 100 - 240VAC(50-60Hz).
- *3. Not applicable for the in-rush current to noise filter for less than 0.2ms.
- *4. Please refer to Fig. A for measurement of Vo, line & load regulation and ripple voltage.
Ripple & noise are measured at 100MHz by using a 150mm twisted pair of load wires terminated with a 0.1uF and 100uF capacitor.
- *5. 85 ~ 265VAC & 85 - 300VDC, constant load.
- *6. No load-Full load, constant input voltage.
- *7. Hiccup with automatic recovery.
Avoid to operate at over load or short circuit condition for more than 30seconds.
- *8. OVP circuit will shut down output , manual reset (Re power on) to get output voltage.
- *9. Output Deratings
 - Derating at standard mounting. Refer to output derating curve (CA824-01-02/CO2_).
 - Load (%) is percent of maximum output power or maximum output current, do not exceed its derating of maximum load.
- *10. The outputs of this product may, under fault conditions, exceed SELV voltage limits.
Therefore the outputs must be earthed in the end equipment to maintain SELV.
If the outputs are not earthed, they must be considered hazardous and must not be made user accessible.
- *11. Output Derating needed when input voltage less than 100VAC. Refer to output derating vs. input voltage (CA824-01-03/CO2-_).
