\*Read Instruction Manual (A291-04-01\_) carefully, before using the power supply unit.

=NOTES=

- \*1. When using the product above the nominal output voltage, derate the output current so that the maximum output power is not exceeded. Please refer to Fig. A.  
(\*a) Limited by maximum output power value
- \*2. Ta=25°C, nominal output voltage and maximum output power.
- \*3. Not applicable for the inrush current to Noise Filter for less than 0.2ms.
- \*4. Measured by the each measuring method of UL, CSA, EN and Den-an (at 60Hz), Ta=25°C.
- \*5. Output voltage external control range using CV terminal and communication function.
- \*6. 85-132VAC/170-265VAC, constant load.
- \*7. No load - Full load, constant input voltage.
- \*8. Please refer to Instruction Manual (A291-04-01\_) for measurement of ripple noise voltage.
- \*9. Constant current limit with automatic recovery.  
If the overcurrent condition continues for more than 30 seconds, the output will shut down.  
A dynamic overload, such as an output short circuit, will cause the output to shut down.
- \*10. OVP circuit will shut the output down, manual reset.
- \*11. Output voltage external control range using CC terminal and communication function.
- \*12. Minimum output voltage - Nominal output voltage, constant input voltage.

- \*14. Up to 10 units.
- \*15. Up to 3 units.
- \*16. Use a measuring instrument whose input impedance is 500kΩ or more.
- \*17. <Communication function example>  
•Control of output voltage and output current. •Remote ON/OFF control.  
•Product status including product life can be monitored.  
•Operation history can be obtained.(OCP,OVP,AC Fail, etc.) etc.  
Refer to instruction manual (A291-04-01\_) and communication manual (A291-04-02\_).

(\* ) Maximum output power depends on output voltage. Refer to output ratings for values.

- \*18. Output Derating  
- Refer to OUTPUT CURRENT vs. AMBIENT TEMPERATURE (A291-01-02\_).  
At -40 to -20°C, the electrical characteristics are not guaranteed.
- \*19. The specifications are based on TDK-Lambda standard measurement conditions.  
The power supply is considered a component which will be installed into a final equipment.  
The final equipment should be re-evaluated that it meets EMC, vibration and shock requirement.
- \*20. Mounting A only.
- \*21. Variable speed fan. Fan noise is 45dB (typ) at 25°C and 70% load.
- \*22. Signal and control ports interface cables length: Less than 3m, DC output power port cables length: Less than 30m.
- \*23. When changing the input voltage from 100Vac line to 200Vac line, or from 200Vac line to 100Vac line, first cut off the input and wait 60 seconds before changing.
- \*24. Please refer to Fig.B for maximum output power of each input voltage.
