*Read instruction manual carefully, before using the power supply unit.

=NOTES=

- *1. At 100VAC/200VAC, Ta=25°C, nominal output voltage and maximum output power.
- *2. For cases where conformance to various safety specs (UL, CSA, EN) are required, to be described as 100 - 240VAC(50 - 60Hz).
- *3. Not applicable for the inrush current to Noise Filter for less than 0.2ms.
- *4. Measure with JEITA RC-9131B probe, Bandwidth of scope :100MHz.
For start up at low ambient temperature and low input voltage, output ripple noise might not meet specification.
However, specification can be met after 1 minute.
- *5. 85 - 265VAC, constant load.
- *6. No load-Full load, constant input voltage.
- *7. Hiccup with automatic recovery.
Avoid to operate at over load or short circuit condition.
- *8. OVP apply the output zener clamp circuit.
- *9. At 100VAC with 70% load ; 200VAC with 100% load.
- *10. Output Derating
 - Refer to OUTPUT DERATING CURVE (FB005-01-02_).
 - Load (%) is percent of maximum output power or maximum output current, do not exceed its derating of maximum load.
 - For conditions of start up at -40°C to -10°C, refer to derating curve (FB005-01-03_).
- *11. Output derating needed when input voltage less than 100VAC. Refer to LOAD vs. INPUT VOLTAGE (FB005-01-02_).
- *12. The /KW model didn't get safety approval, but the installed power supply on PCB board already got safety certification.
- *13. The power supply is considered a component which will be installed into a final equipment.
The final equipment should be re-evaluated that it meets EMC directives.

DERATING TO START UP AT Ta: -40 to -10°C

FB005-01-03A

VIN(VAC)	LOAD (%)	
	Normal start up	Stable output after 1 min from start up
$85 \leq V_{in} < 170$	60	70
$170 \leq V_{in} \leq 265$	100	100

NOTE :

- * At Ta: -40 to -10°C
- * Input voltage : Not gradual start up.
- * Do not use the load that is constant current mode.
- * Avoid forced air cooling . It is assumed that inside of power supply is heated by self-heating within 1 minute.
- * No condensing.
- * Pay attention to above items before using the unit. Incorrect usage could lead to unstable output voltage.
