*Read instruction manual carefully, before using the power supply unit.

SPECIFICATIONS (2/2)

=NC)TES=
*1.	At 100VAC/200VAC, Ta=25°C, nominal output voltage and maximum output power.
*2.	For cases where conformance to various safety specs (UL, CSA, EN) are required, to be described as 100-240Vac (50-60Hz).
*3.	Not applicable for the inrush current to noise filter for less than 0.2ms.
*4.	Please refer to Fig.A for measurement of Vo, Line&Load regulation and ripple voltage.
*5.	85 - 265VAC, constant load.
*6.	No load to full load, constant input voltage.
*7.	Current limiting (Hiccup) with automatic recovery.
	Avoid to operate at over load or short circuit condition.
*8.	OVP circuit will be shut down output, manual reset (Re power on).
*9.	Measured by the each measuring method of UL, CSA, EN and DENAN (at 60Hz), Ta=25°C.
*10.	At 100VAC, Ta=25°C, nominal output voltage and 80% output power.
*11.	Output Deratings,

- Convection cooling output derating. Refer to OUTPUT DERATING vs. AMBIENT TEMPERATURE (FA013-01-02/A_).

- Forced air cooling output derating. Refer to OUTPUT DERATING vs. AMBIENT TEMPERATURE (FA013-01-03/A_).
- Load (%) is persent of maximum output power or maximum output current, whichever is greater.
- It must not exceed its specification and derating.
- *12. The result is evaluated by TDK-Lambda standard measurement condition.

The power supply is considered a component which will be installed into a final equipment. The final equipment should be re-evaluated that it meets EMC, Vibration and Shock directives.

Fig. A

FA013-01-02/A

OUTPUT DERATING vs. AMBIENT TEMPERATURE

*COOLING : CONVECTION COOLING

Load (%) is percent of maximum output power or maximum output current, whichever is greater. It must not exceed its specification and derating.

	LOAD (%)
